PROFESSIONAL SUMMARY

Java Backend Developer with hands-on experience architecting an 8-service microservices banking platform, designing 45+ REST APIs, and implementing JWT-secured distributed systems using Spring Boot, Spring Cloud, and PostgreSQL. Experienced in production deployment, scalable backend architecture, and Spring Security — targeting backend engineering roles at product-based companies.

TECHNICAL SKILLS

- **Languages:** Java, SQL, Python, JavaScript
- **Frameworks & Libraries:** Spring Boot, Spring Security, Spring Cloud (Gateway, Eureka, OpenFeign), Spring Data JPA, Hibernate
- **Databases:** PostgreSQL, MySQL
- **Developer Tools:** Git, GitHub, Docker, Maven, IntelliJ IDEA, Linux, Postman
- **Testing:** JUnit 5, Mockito
- **Core Concepts:** REST APIs, Microservices, JWT, OOP, SOLID Principles, Design Patterns, MVC
- **Familiar With:** AWS (EC2, S3, RDS), Redis, Kubernetes, CI/CD

PROJECTS

DIGITAL BANKING SYSTEM – MICROSERVICES PLATFORM

[repo link](#)

Java 17 | Spring Boot | Spring Cloud | Docker Compose | PostgreSQL | JWT | REST APIs

- Architected an 8-service cloud-native banking platform spanning Authentication, Account, Transaction, Loan, Card, and Customer domains, containerized end-to-end with Docker Compose.
- Engineered Spring Cloud Gateway and Eureka Service Discovery to enable scalable inter-service routing, eliminating hardcoded service URLs and decoupling all 8 microservices.
- Secured all REST endpoints with Spring Security, JWT-based authentication, and Role-Based Access Control (RBAC), enforcing consistent authorization across services via the API gateway.

MYBANK – FULL-STACK BANKING APPLICATION

[repo link](#)

Java | Spring Boot | Spring Security | PostgreSQL | JWT | Vanilla JS | Render

[live link](#)

- Engineered a production-deployed, full-stack banking application with 6 modules — Accounts, Cards, Loans, Transactions, Statements, and Authentication — built on Spring Boot and PostgreSQL.
- Implemented layered security with Spring Security, JWT, and RBAC; designed a normalized relational schema with referential integrity across all banking entities.
- Developed a JPMC/Chase-inspired Vanilla JS frontend enabling real-time account management, card controls, and loan tracking with a clean, responsive UI.

SMART SERVICE BOOKING PLATFORM

[repo link](#)

Java | Spring Boot | PostgreSQL | JWT | REST APIs | Google Maps API | Render

[live link](#)

- Built and deployed a multi-role service booking platform with 20+ REST API endpoints covering customer registration, technician assignment, booking lifecycle, and queue management.
- Integrated Google Maps API for real-time technician location tracking and implemented a priority-based dispatch system using Spring Boot's layered architecture.
- Designed a normalized PostgreSQL schema with relational integrity across bookings, technicians, and service categories; secured endpoints with JWT authentication.

ACHIEVEMENTS

- Designed and implemented **45+ REST API endpoints** across multiple backend applications using Java, Spring Boot, and PostgreSQL.
- Co-authored a **technical research paper** on LiteWing, a gesture-controlled drone system built with ESP32-S3 and MPU6050 sensors.
- Solved **200+ Data Structures & Algorithms** problems across LeetCode and GeeksforGeeks, covering Trees, Graphs, Dynamic Programming, and Binary Search.

CERTIFICATIONS

- JPMorgan Chase & Co. – Software Engineering Virtual Experience (**Forage**)
- AWS Solutions Architect – Virtual Experience (**Forage**)

EDUCATION

B.E. in Electronics & Telecommunication Engineering

2022 – 2026

Atharva College of Engineering, Mumbai University

CGPA: 7.25

RELEVANT COURSEWORK
